EDUCATION

SRM University of Science & Technology, Kattankulathur
B.Tech CSE — AI & ML
Expected 2028
CGPA: 8.52 / 10
Class XII: 95.4%
Class X: 90.4%

Relevant Coursework: Data Structures & Algorithms, DBMS, OOP, Statistics, Linear Algebra

TECHNICAL SKILLS

- Java
- Python
- C
- MySQL
- JDBC
- JSP & Servlets
- NumPy & pandas
- scikit-learn
- Matplotlib & Seaborn

CERTIFICATES

Oracle Certified — Java SE 21
Completed

Tata GenAI Powered Data Analytics Job Simulation
Forage · Sept 2026

PROFESSIONAL SUMMARY

Driven Computer Science undergraduate specializing in AI & ML, backed by a strong academic record (8.52 CGPA, 95.4% in Class XII). Hands-on experience building end-to-end ML pipelines in Python (pandas, scikit-learn) alongside full-stack Java web applications (JSP/Servlets, JDBC, MySQL) — from a Naive Bayes classifier on the Titanic dataset to complaint management and airline reservation platforms. Holds a completed Oracle Java SE 21 certification. A fast learner, dependable problem-solver, and eager to learn new things, always looking to bring technical rigor and fresh ideas to a challenging engineering role.

PROJECTS

Titanic Survival Prediction — Naive Bayes Classifier *Python · pandas · scikit-learn · Matplotlib/Seaborn*

- Built an end-to-end ML pipeline on the Titanic dataset: EDA, missing-value imputation, one-hot encoding, and feature scaling with pandas and NumPy.
- Trained a Gaussian Naive Bayes classifier achieving 78.2% accuracy (0.73 precision, 0.70 recall, 0.71 F1) on a stratified 80/20 train-test split.
- Visualized survival patterns and model performance (confusion matrix, metric comparison, survival by gender/class) using Matplotlib and Seaborn.
- Code and notebook published on GitHub (ML-experiments repository).

Online Complaint Management System *Java · JSP/Servlets · JDBC · MySQL*

- Built a full-stack web application using JSP and Servlets for the presentation and controller layers, with JDBC handling direct SQL-based interaction with a MySQL backend.
- Engineered a role-based access system for admins and users, ensuring secure, structured workflows across the complaint lifecycle.
- Designed the relational schema and wrote parameterized JDBC queries for reliable storage and fast retrieval of complaint records.

Airline Management System *Java · JSP/Servlets · JDBC · MySQL*

- Developed a web-based reservation system with JSP/Servlets on the front end and JDBC-driven MySQL queries for flight schedules, bookings, and passenger data.
- Implemented CRUD operations and a normalized relational schema, using JDBC transactions to keep booking and seat-availability data consistent.
- Applied core software engineering principles — separation of concerns between servlets, DAO classes, and JSP views — for a maintainable architecture.

WHY I STAND OUT

- Consistently high academic performer across all levels of education — top-tier scores in Class X, XII, and undergraduate studies.
- Actively practices data structures & algorithms on LeetCode across Python and Java, with focus areas in Dynamic Programming, Binary Search, and Backtracking.
- Multi-language proficiency (Java, Python, C) enabling versatile, cross-domain problem solving.
- Self-driven learner with a completed Oracle Java SE 21 certification, achieved ahead of graduation.
- Hands-on builder mindset — translates theoretical CS/AI-ML knowledge into functioning, real-world applications.
- Eager to learn new things, with a genuine curiosity that drives continuous growth across languages, tools, and technologies.
